

# TRIO: Tool for Risk, Interventions and Outcomes

Linda Henderson, ACSW, LCSW  
Marcy Snider, B.A  
Griselda Gaytan, B.S  
County of Ventura, California  
NAPSA Conference 2014

# Challenges Facing APS Systems

- Unstable funding and increased accountability
- Changing landscape of the aging population
- Bifurcated social work/health care system
- Lack of federally supported infrastructure
- Lack of a standardized approach to investigation and assessment
- Event/allegation driven approach
- Lack of outcome measures

# The Missing Link.....

A comprehensive  
evidenced-based framework and  
measurement process to provide  
guidance to APS social workers  
ensuring consistency in practice and  
improving outcomes  
for clients served

The background of the slide is a soft-focus photograph of green leaves and stems, with several small, clear water droplets visible on the foliage. The lighting is bright and natural, creating a fresh and organic feel.

# APS Framework: Social Work Practice Model

- Bio-psycho-social assessment
- Person in environment fit

# APS Framework: Progressive Nature of Abuse/Neglect

- Worsens over time without appropriate intervention
- Periods of stability
- Tipping points

“Although longitudinal data are absent, it seems probable that elder abuse situations may follow a pattern similar to disease progression, which would include lead time prior to the manifestation of active signs and symptoms; periods of ‘remission’; and critical points in which mistreatment becomes more intensive or acute”

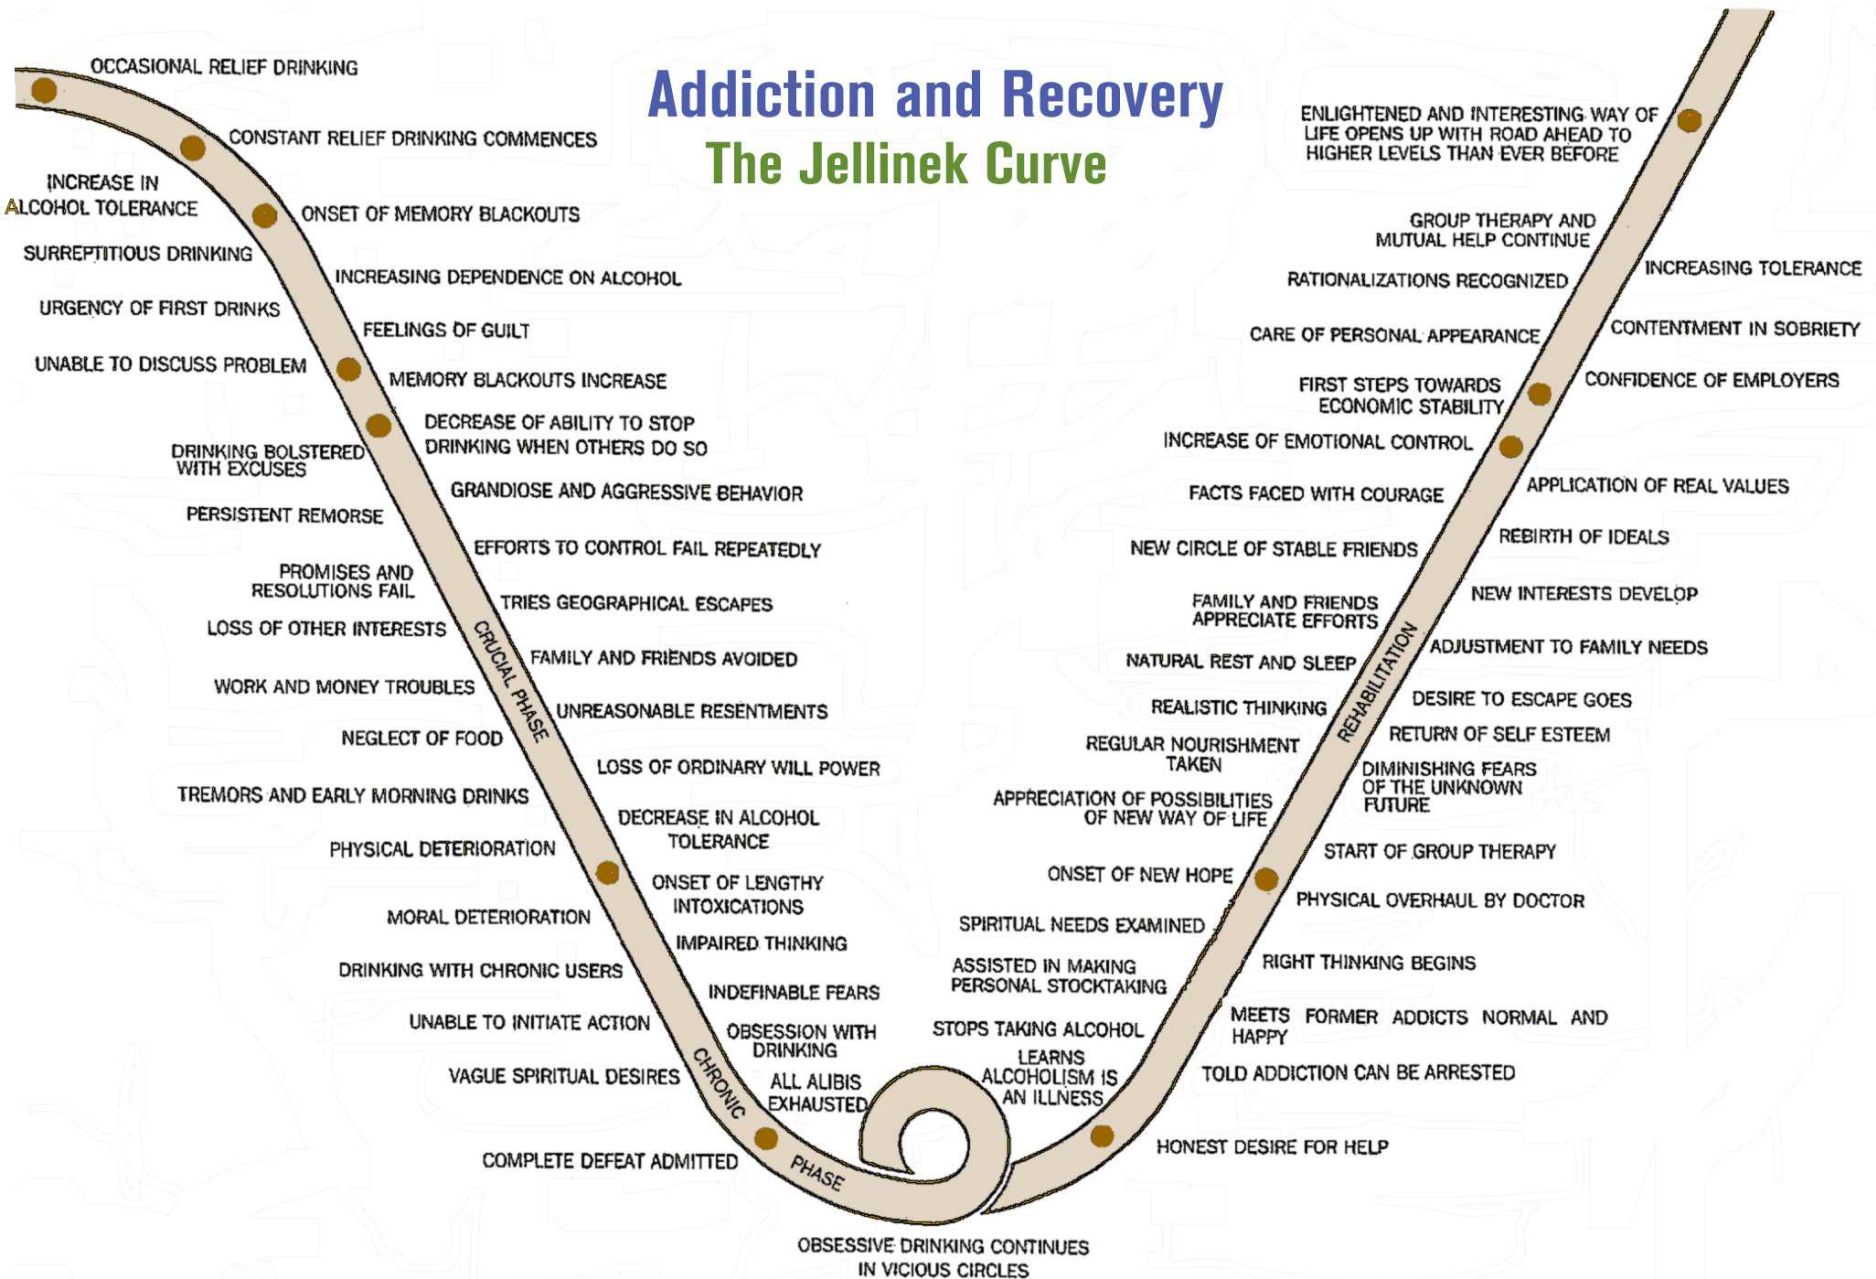

National Academy of Sciences. 2003

Elder Mistreatment Abuse, Neglect and Exploitation in an Aging America

# Addiction and Recovery

## The Jellinek Curve

## Tool for Risk, Interventions and Outcomes

[Link to online demonstration](#)

- Designed by social workers for social workers
- Follows social work practice
- Contains agreed-upon terminology for consistency
- Forms a client profile based on cluster of elements
- Guides, but does not direct
- Documents the work of the APS social worker
- Measures progress toward goal: to improve, stabilize or reduce the rate of decline in safety, stability and health
- Measures prognosis of recurrence
- Measures an agreed-upon goal to eliminate or reduce the protective issue

### Psychological Indicators

- ☐ Self-blame for current situation-Makes excuses for alleged perpetrator ⓘ
- ☐ Feelings of shame, guilt, fear and or loneliness ⓘ
- ☐ Feelings of depression ⓘ
- ☐ Sense of resignation and hopelessness with vague reference to mistreatment ⓘ
- ☐ Appears anxious ⓘ
- ☐ Appears clingy ⓘ
- ☐ Appears afraid of someone or something ⓘ
- ☐ Behavior that is passive ⓘ
- ☐ Behavior that is helpless ⓘ
- ☐ Behavior that is withdrawn ⓘ
- ☐ Hoarding ⓘ

Return to Curve

# The Ventura County APS Model

- Regularly scheduled Supervision
- Curb-side consulting
- Regularly scheduled MDTs
- Integrated medical/social work
- Use of evidenced based tools
- TRIO
- Robust case management system

# TRIO Outcomes

November 1, 2011 to September 5, 2014

Total Episodes n= 4,764

CONFIRMED Episodes of ABUSE/NEGLECT (n= 2,293)

	Episodes with Social Work Only	Episodes with Social Work + In- Home Nursing	Difficult Episodes Presented to Rapid Response MDT	Difficult Episodes Presented to FAST
	n = 1,572	n= 549	n=159	n = 13
Protective Issue unresolved	27%	<b>19%</b>	24%	15%
Protective Issue eliminated or reduced	73%	81%	76%	85%
Total (rounding with rounding errors)	100%	100%	100%	100%

Statistically significant differences found using chi-square test ( $p < .01$ )

# 180-Day Recidivism by Prognosis

Prognosis for recidivism (evaluated at case closure) and actual 180-day APS recidivism were closely related

Statistically significant difference ( $p < .001$ )
